Seat Belt Use in 2021 — Use Rates in the States and Territories

Highlights

In 2021, seat belt use in the United States ranged from 72.3 percent in the U.S. Virgin Islands to 97.2 percent in California. Twenty-three States, American Samoa, the District of Columbia, Guam, and the Northern Mariana Islands achieved seat belt use rates of 90 percent or higher. These results are from probability-based observational surveys conducted by the 50 States, the District of Columbia, and U.S. Territories.

Background

In 2011, NHTSA established new uniform criteria for observational surveys. States conduct and report out from their annual surveys of seat belt use in accordance with the <u>Uniform Criteria for State Observational Surveys of Seat Belt Use</u> (per 23 CFR Part 1340). Compliance with the criteria is verified annually by NHTSA's National Center for Statistics and Analysis.

Results

Seat belt use rates in the States, the District of Columbia, Puerto Rico, other U.S. Territories, and nationwide from 2014 to 2021 are listed in the table below. Rates in jurisdictions with primary seat belt enforcement during the calendar year of the survey are shaded in the table. However, the law might not have taken effect when the survey was being conducted. The 2021 State and Territory survey results include the following:

Twenty-three States, American Samoa, the District of Columbia, Guam, and the Northern Mariana Islands achieved belt use rates of 90 percent or higher. Jurisdictions with stronger seat belt enforcement laws continue to exhibit generally higher use rates than those with weaker laws.

National Seat Belt Use Rate

The nationwide seat belt use rate was 90.4 percent in 2021, as measured by NHTSA's National Occupant Protection Use Survey (NOPUS). NOPUS is a national probability-based survey, independent from State belt use surveys. NOPUS provides NHTSA's official measure of nation-wide seat belt use in the United States and other related information. Due to a difference in survey methodology, NOPUS provides a different measure of nationwide use than would be obtained by combining the use rates from the States and Territories.
